

Anti-Spatter solution

Blue Magic® Anti-Spatter solution

Blue Magic® Anti-Spatter Solution is an environmentally safe product formulated to provide maximum protection for industrial robotic and semi-automatic welding applications. This new generation of anti-spatter solution provides super performance even at high temperatures. The biodegradable formula contains no harmful chemicals and is noncombustible.

To avoid high freight costs, Blue Magic® is also available as a concentrate. This concentrate is supplied in 19-liter jerrycans and can be diluted with de-ionized water to produce up to 200 liters of Blue Magic anti-spatter.

The Blue Magic® Anti-Spatter formula is also available in a non-flammable, air-powered spray can. Designed to use only compressed air, the can ensures 100% product usage down to the very last drop. Thanks to the 360° spray capacity, the product is applied evenly to different surfaces.

Torch Wizard® Robotic Nozzle Cleaning Station

Torch Wizard® Automatic Robotic Nozzle Cleaning Stations assist in maintaining quality and productivity in MIG welding cells by quickly and efficiently removing spatter build-up in the gas nozzle. Anti-spatter is applied evenly to the nozzle and tip through an isolated compartment, eliminating wet debris build-up on the reamer blade and motor (anti-spatter feature excluded on models for aluminum welding).
